Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 74-100 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-50 and 1-12 of U.S. Patent No. 6,019,944 and 5,885,527 respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because both patents claim assay devices having non-porous surfaces, particles and discrete hydrophilic regions adjacent to hydrophobic regions.

Claims 85-86 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-21 of U.S. Patent No. 6,143,576. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims are directed to an assay device that detects one or more ligands having a nonporous surface and particles with immobilized reagents thereon.

Claim Rejections - 35 USC § 102

Art Unit: 1743

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 85-91 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Watts et al.

Watts et al. teach a device having a non-porous surface comprising a plurality of particles immobilized thereon where the particles further comprise immobilized receptors capable of binding to a plurality of target ligands. Watts et al. teach in column 9 lines 62-65 the surfaces can be roughened which has been read on the claimed textured surface containing depressions and protrusions.

Claims 85-86 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Ullman et al. (USP 5,512,659).

Ullman et al. teach an assay device having a non-porous surface comprising a plurality of particles immobilized thereon where the particles further comprise immobilized receptors capable of binding to a plurality of target ligands.

Response to Arguments

Applicant's arguments with respect to claims 74-91 have been considered but are moot in view of the new ground(s) of rejection.
